**DETAILED ACTION****EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Victor (Reg. No. 39867) on 3/27/08.

The application has been amended as follows:

27. (Currently Amended) An article of manufacture comprising at least one of a hardware device having hardware logic and a computer readable storage medium having computer executable codes for performing operations to construct constructing a packet, the operations comprising:

receiving a request to construct one packet, including information on at least one header and a payload to include in the packet;

generating the at least one header for the received request;

writing the generated at least one header in a first queue;

requesting the payload to include in the packet;

writing the received payload to a second queue;

reading the generated at least one header and payload from the first and second queues;

Art Unit: 2616

[[and]]

including the read at least one header and payload in the packet;  
in response to constructing one packet, determining whether all headers and  
payload for a next packet according to a packet ordering are buffered in the first and  
second queues; and  
constructing the next packet in response to determining that all headers and  
payload for the next packet are buffered in the first and second queues.

37. (Currently Amended) The article of manufacture of claim 27, wherein the  
operations further comprise: An article of manufacture comprising at least one of a  
hardware device having hardware logic and a computer readable storage medium having  
computer executable codes for performing operations to construct constructing a packet,  
the operations comprising:

receiving a request to construct one packet, including information on at least one  
header and a payload to include in the packet;

generating the at least one header for the received request;  
writing the generated at least one header in a first queue;  
requesting the payload to include in the packet;  
writing the received payload to a second queue;

Art Unit: 2616

reading the generated at least one header and payload from the first and second queues;

[[and]]

including the read at least one header and payload in the packet;

queueing a work request including the request to construct the packet in a send queue that is in one of a plurality of queue pairs, wherein each queue pair includes one send queue and one receive queue; and

interpreting the work request to determine the at least one header and payload for the packet to construct, wherein the determined at least one header is generated and the determined payload is requested.

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach, guest or disclose directly or indirectly the following limitation in combination with other limitation: An article of manufacture comprising at least one of a hardware device having hardware logic and a computer readable storage medium having computer executable codes for performing operations to construct a packet, the operations comprising: receiving a request to construct one packet, including information on at least one header and a payload to include in the packet; generating the at least one header for the received request; writing the generated at least one header in a first queue; requesting the payload to include in the packet; writing the received payload to a second queue; reading the generated at least one header and payload from the first and second

Art Unit: 2616

queues; including the read at least one header and payload in the packet; queuing a work request including the request to construct the packet in a send queue that is in one of a plurality of queue pairs, wherein each queue pair includes one send queue and one receive queue; and interpreting the work request to determine the at least one header and payload for the packet to construct, wherein the determined at least one header is generated and the determined payload is requested.

The “Article of manufacture” in claims 27-32 and 34-38 is disclosed in specification as to codes or logic implemented in hardware logic (e.g., an integrated circuit chip, programmable gate array, Application Specific Integrated Circuit (ASIC), etc.) or a computer readable medium, such as magnetic storage medium (e.g., hard disk drives, floppy disks, tape, etc.), optical storage (CD-ROMs, optical disks, etc.), volatile and non-volatile memory devices (e.g., EEPROMs, ROMs, PROMs, RAMs, DRAMs, SRAMs, firmware, programmable logic, etc.). Code in the computer readable medium is accessed and executed by a processor. The “article of manufacture” does not include the “transmission media, signal propagating through space, radio waves, infrared signals, etc.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
